

AgriLLM

Offline agricultural intelligence
for Africa

OFFLINE · ON DEMAND · EVEN ON MODEST HARDWARE · NO SUBSCRIPTION

WHAT IT DOES

Advice on demand, in plain words

African smallholders need farming advice daily, and extension officers are few. AgriLLM extends their reach by answering everyday farm questions on demand, offline, on a budget laptop.

A FARMER ASKS

Small purple flowering weeds are coming up around my maize and the maize is stunted even though I applied fertiliser. What is this?

AGRILLM ANSWERS

These are *Striga hermonthica*, also known as witchweed, which is a parasitic weed. It attaches to maize roots underground and sucks water and nutrients from the plant, causing the stunting even with reasonable fertiliser application.

Chickens dying, twisted necks names Newcastle disease and the first steps to take

Why rotate maize? a few plain sentences a farmer can act on
